Protecting Whitefish Area Water

The Whitefish Lake Institute (WLI) is a science and education based non-profit corporation led by a volunteer board of directors and assisted by two volunteer committees – the Science Advisory Committee and Citizens' Advisory Committee.

Not an advocacy organization, WLI embraces three key program areas, Scientific Research, Education & Outreach, and Community Stewardship. Within these areas, WLI establishes programs appropriate to achieving its mission – to protect and improve Whitefish Lake and Whitefish area water resources today, while providing a collective vision for tomorrow.

Data resulting from the Scientific Research program is provided to the community and resource managers to enable them to make informed decisions about water quality issues. WLI focuses most of its research work on Whitefish Lake and its tributaries, but also researches other water bodies in Flathead, Lake, and Lincoln Counties.

Education & Outreach programs include Pre-12 classroom visits, in-house college internships, educator in-service training, presentations to civic groups, and Road Scholar programs for several hundred seniors annually.

Through the Community Stewardship Program, citizens participate in and are recognized for activities that protect Whitefish area water resources. In 2013, WLI completed its wheelchair-friendly Living Wetlands Interpretive Nature Trail on the property it owns and manages in Whitefish.
