Lake trout invasion in western Glacier National Park

Bull Trout Lakes:
9 of 12 invaded
8 functionally extinct

Lake Trout Conversion

Lake Trout Displace Bull Trout and Disrupt Food Webs

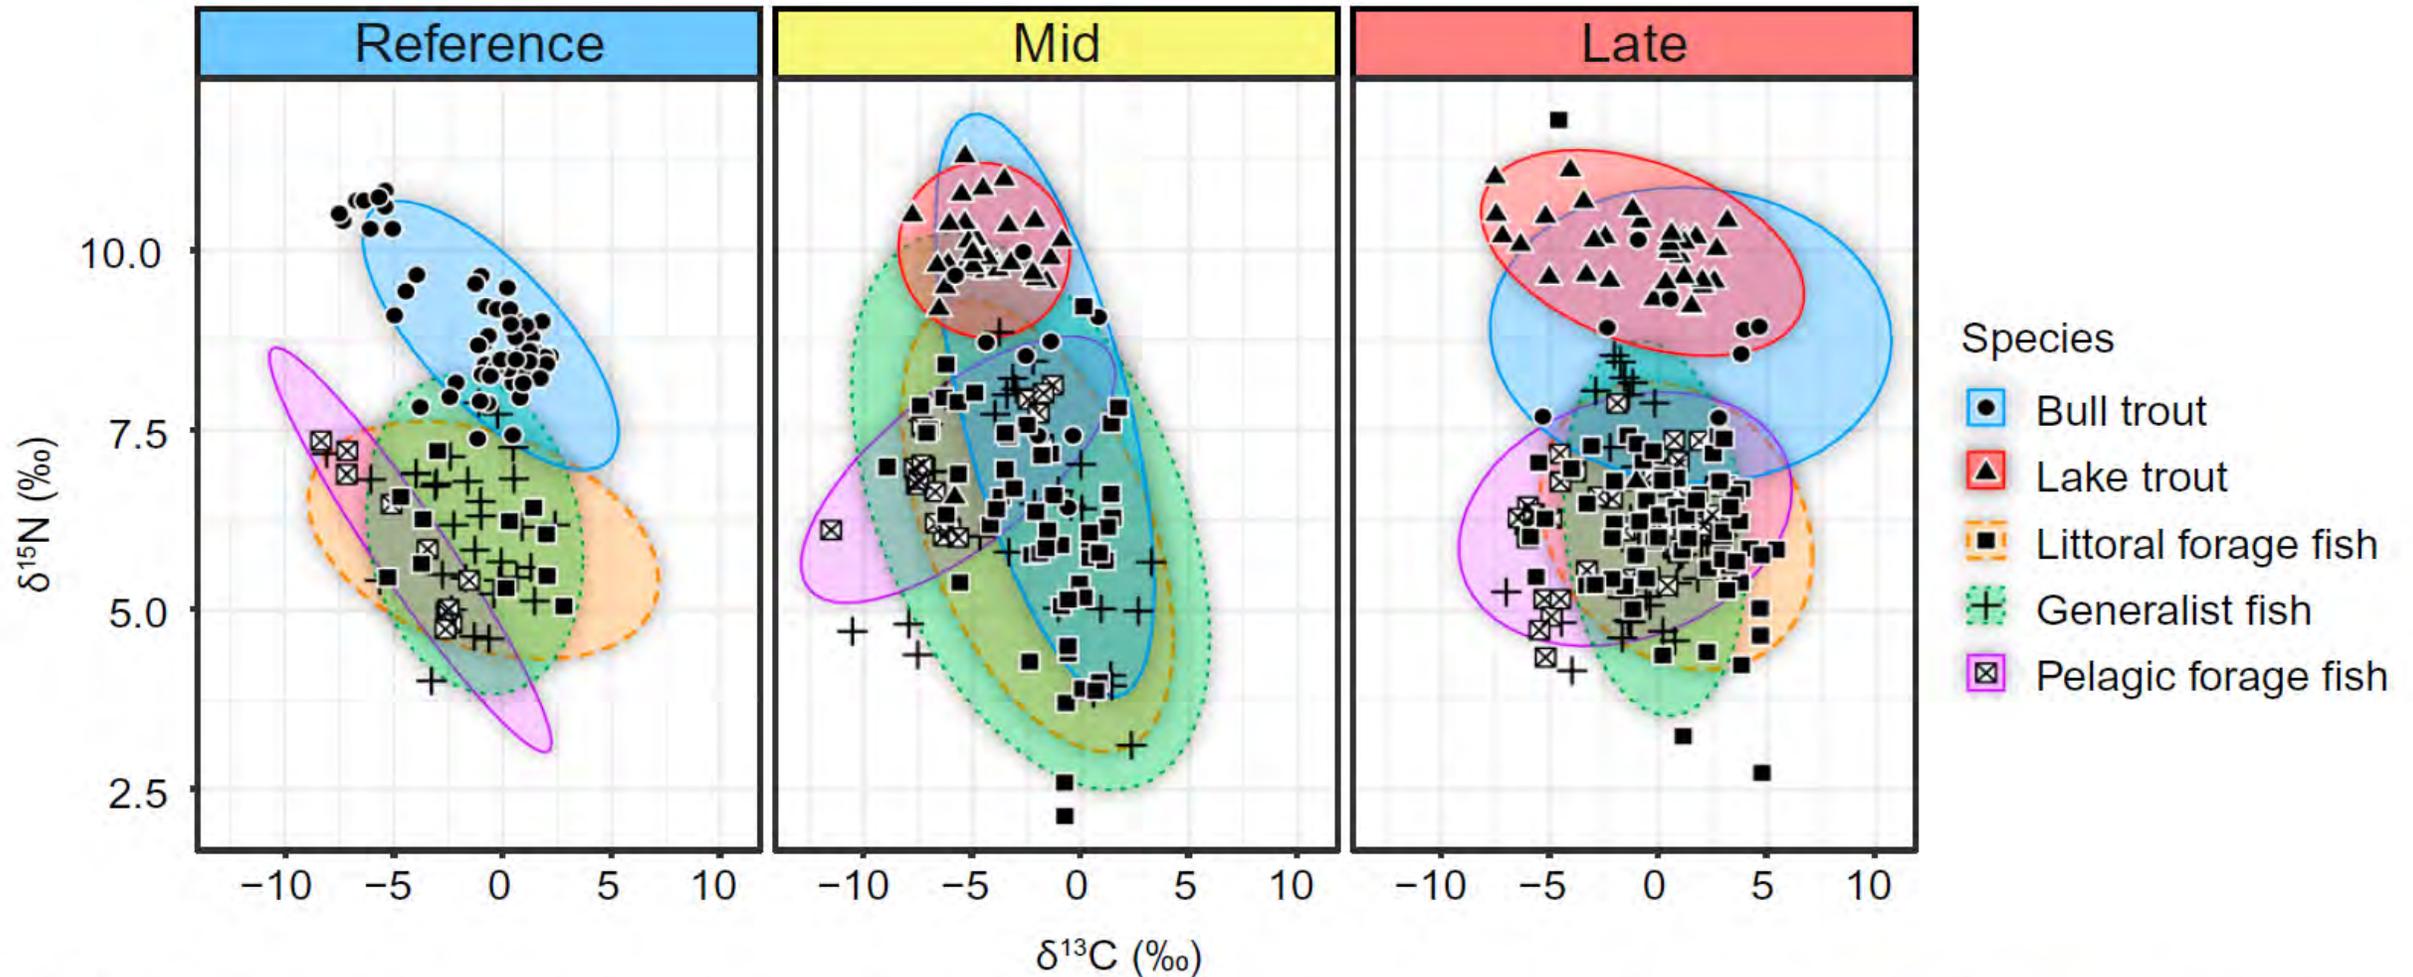

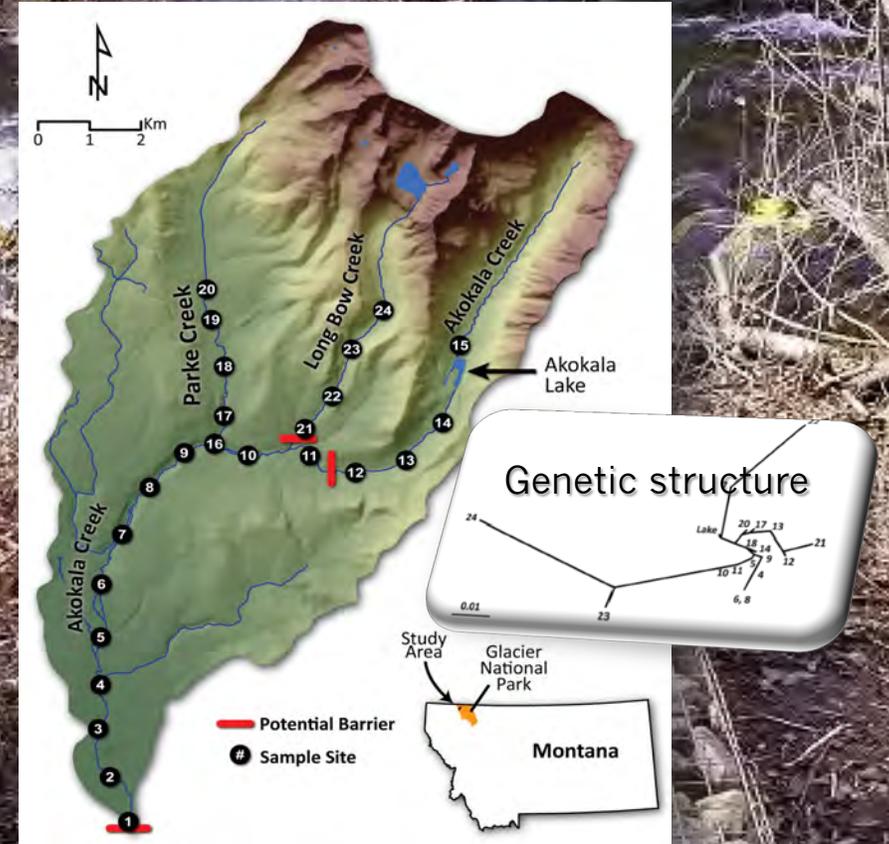

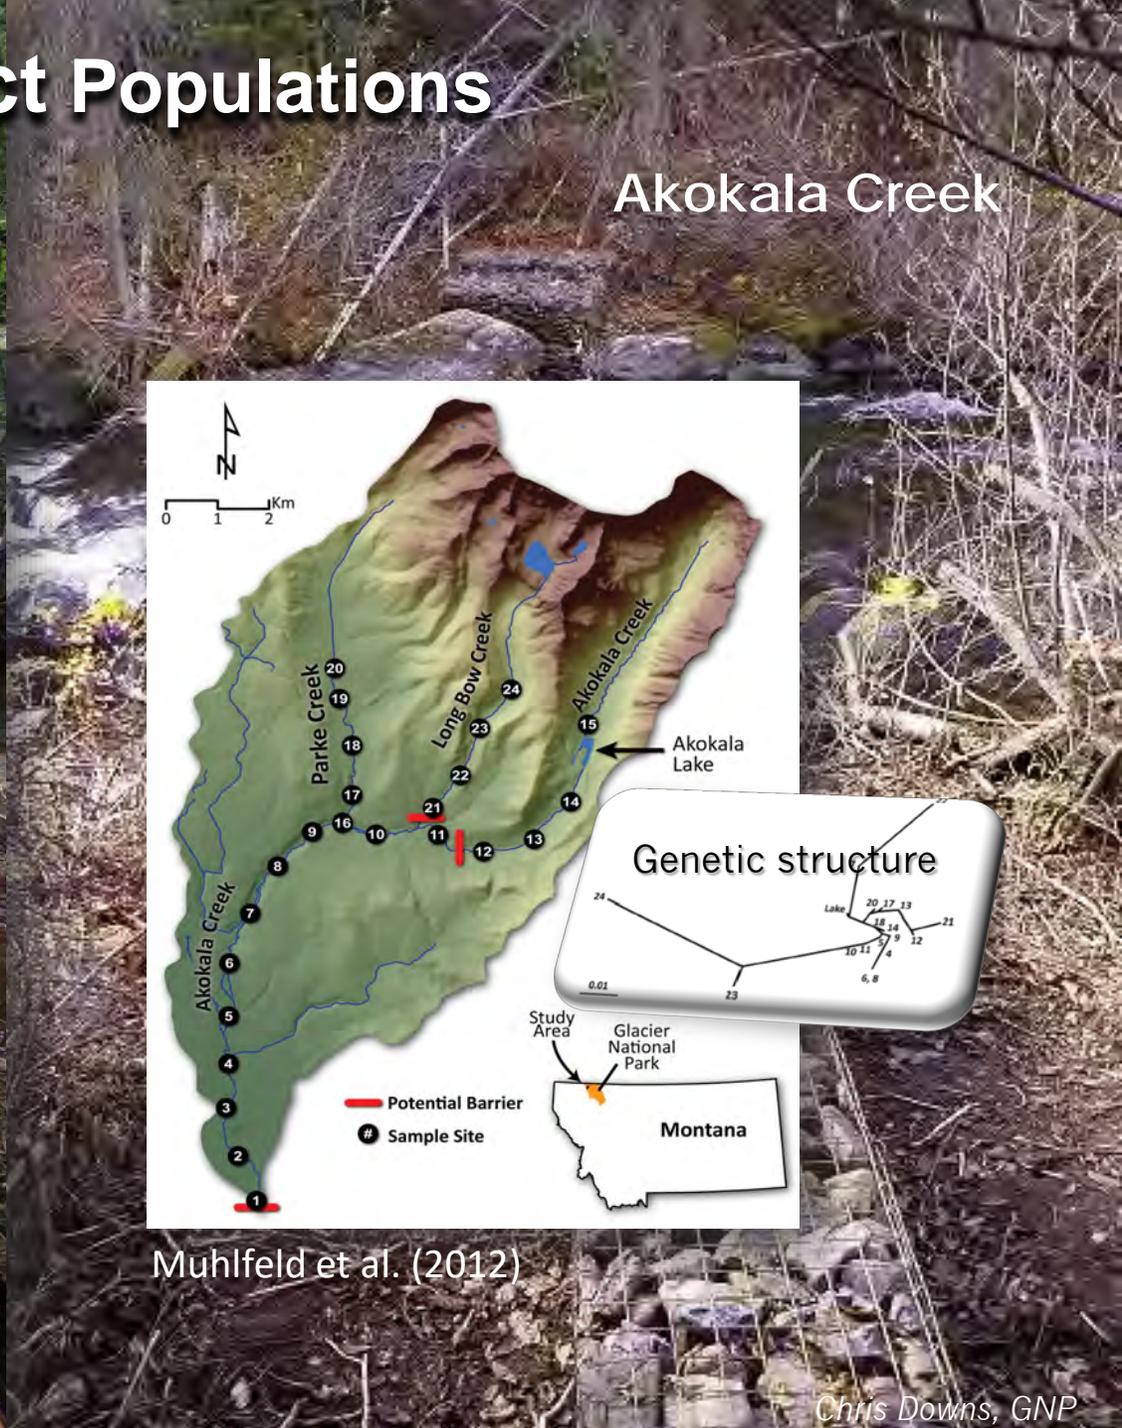

Fig. 1. Food web structure of uninvaded and invaded lakes. Baseline-corrected $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ for fish (points; $n = 437$; *SI Appendix, Table S1*) from lakes representing reference, middle (Mid), and late stages of lake trout invasion (*SI Appendix, Table S2*). Mesopredator fish species were aggregated to functional groups (*SI Appendix, Table S3*). Ellipses are 95% CIs around mean $\delta^{13}\text{C}$ and $\delta^{15}\text{N}$ for each fish species or functional group.

Camas Lake

GUNSIGHT LAKE PROJECT

- NON-NATIVE RAINBOW TROUT THREATENING DOWNSTREAM NATIVE FISH POPULATIONS
- OPPORTUNITY TO CREATE A NATIVE FISH REFUGE
- REMOVED RAINBOW TROUT IN SEPTEMBER 2023
- PLANT GENETICALLY PURE LOCAL STOCK WESTSLOPE CUTTHROAT TROUT, BULL TROUT, AND MOUNTAIN WHITEFISH IN 2024-2030
- ESTABLISH NEW CONSERVATION POPULATIONS SECURE FROM NON-NATIVE FISH AND WITH ADDITIONAL SECURITY FROM CLIMATE CHANGE
